U.S. Officials Increasingly Discuss Sending Troops to Nicaragua

By Joel Brinkley and Bill Keller

Page 5.

New York Times Service WASHINGTON - Reagan administration officials have begin openly discussing a subject they had previously refused even to speculate about: the possibility that American combat forces might one day be sent into Nicaragua.

No one in government is saying that an invasion is an imminent or desirable step. But in the last few weeks, President Ronald Reagan, Secretary of State George P. Shultz and other senior officials have for the first time begun warning that if other policies fail, the United States may be left with little choice in the years ahead. interviews with almost 50 military, dip-

lomatic and foreign government experts in Washington, Panama, Costa Rica, Nicaragua and Honduras indicate that discussion of the issue has become commonplace in official circles.

The interviews and other inquiries also brought to light these points: Although no one in Congress has pub-

licly called for U.S. military involvement in Nicaragua, the mood on Capitol Hill in the change that almost overnight. last few weeks appears to have shifted without support from Congress, admin-sharply against the Sandinist government. istration officials agree, mintary involve-Many members say there is growing doubt ment in Nicaragua is unlikely. Today, Conthat any of the policy options still available, including renewed aid to the insur-gents, is likely to bring fundamental changes in Managna's behavior.

• Administration officials have agreed military force in Nicaragua "must realistitate a number of possible situations would that a number of possible situations would that a number of possible situations would tally be recognized as an eventual option in leave the United States little choice but to the region, if other policy alternatives fail."

In a speech to the American Bar Associum to the risk of "some variant of the Cuban has been almost palpable."

By Bill Keller

New York Times Service
WASHINGTON — Senior U.S. military leaders, in a split with Defense Secretary Caspar W. Weinberger, have concluded that the United States would probably lose more than it would gain by abandoning the 1979 SALT-2 arms limitation treaty with the Soviet Union, according to Pentagon officials.

The military leaders, including at least three of the five members of the Joint Chiefs of Staff, have determined that the Soviet Union would be able to outbuild the United States in an unrestrained nuclear arms race, while the U.S. military would be held back by budgetary and political restraints, the officials said.

One official said the military sentiment was also colored by a worry that an all-out competition in nuclear weaponry would drain money away from tanks for the army and ships for the navy as well

His Oratorical, Political Skills Mask The Absence of a Detailed Program

By Dusko Doder Washington Post Service
MOSCOW — In the 12 weeks since he became Soviet leader, Mikhail S. Gorbachev has been projecting an almost breathtaking determination to make changes in the Soviet economy. In fact, he has focused on this issue in a way that

far has been extraordinarily smooth. The ease with which he

Foreign observers see this as a possible trap. Expectations are runyet to come up with a well-developed and thought-out package of economic reforms.

But the new team has more time to work out its program before the next Communist Party congress in

The ground for this smooth transition was prepared by Mr. Gorbachev's political mentor, the late Yuri V. Andropov, who not only selected the men who run the Soviet Union today but also laid down a strategic course for the rest of this

But this is only a part of the current picture. In a relatively short time, Mr. Gorbachev, 54, has managed to establish himself as a man of formidable political skills, an excellent public speaker and a leader of great determination.

That he has pushed Mr. Andropov's program with more vigor and persistence than did his immediate predecessor, Konstantin U. Chernenko, has been the source of conning high while the leadership has siderable satisfaction for those ele-

Soviet to Divert Arctic Rivers To Irrigate Arid Central Asia

MOSCOW - The Soviet Union will go ahead with a major project to divert water south from Siberia's great north-flowing rivers to irrigate arid land, the government said Wednesday.

Many Western experts had suggested that the ambitious and controversial plan, which some ecologists fear could adversely affect the polar ice-cap, might be dropped by Mikhail S. Gorbachev, the Soviet

But Nikolai Vasilyev, minister of land reclamation and water re-sources, said in Moscow on Wednesday that plans to carry out the project were already advanced.

"This is the only way to put our food program into effect," he said. The program is aimed at eliminating chronic shortages by 1990.

The sources said that in an EC Commission meeting earlier Wednesday in Brussels, one commissioner suggested that the EC establish an emergency fund that could be used to retaliate against the U.S. subsidy program. They said the suggestion was opposed by Henning Christophersen, the EC budget commissioner.

Another official said, "We are concerned not only by the U.S. action but also by the price under-cutting aspect, which risks destabilizing agricultural markets." The officials were attending a

conference sponsored jointly by the U.S. mission to the EC and the EC Commission delegation in Wash-

Rickover's Gifts: Gravy in the Navy Report Details 'Trinkets' He Got From Sub Builder

By Michael Weisskopf Washington Post Service
WASHINGTON — When the General Dynamics Corp. staged

sea trials for its nuclear submarines, it spared no consideration for Admiral Hyman G. Rickover, who was supervising the company's work for the U.S. Navy in the 1960s and 1970s. Officials at the company's

Electric Boat Division in Grot-on. Connecticut, had Admiral Rickover's civilian suit cleaned and pressed and set out khaki navy uniforms for him to wear during the outing. They provided newspapers, fresh fruit, lemon drops, best-selling books and 25 to 30 pounds of fresh fish.

The company's concern for the admiral's comforts and convenience was revealed Tuesday

in a navy report.
Admiral Rickover was also given \$19,000 worth of gifts to orate boat launchings and keel layings, according to the report. These included items such as sterling sliver trays, which he often presented to par-

ticipating dignitaries.
In addition he received personal gifts that included a set of the Encyclopaedia Britannica, at least 15 pairs of nautilus-shell bookends and \$1,125 worth of jewelry for his wife.

The navy's Ad Hoc Gramities Board was empaneled last No-vember by Navy Secretary John F. Lehman Jr. to investigate allegations against Admiral Rickover, and it presented its report to Mr. Lehman two weeks ago. The report prompted his deci-

sion to issue a letter of censure to Admiral Rickover, cancel two General Dynamics contracts and fine the company the legal maximum of \$676,283 — 10 times the amount of illegal gratuities estimated to have gone to the admi-

By Bill Keller and Joel Brinkley New York Times Service

PANAMA CITY — in the last two years, the U.S. Southern Command, from its tropical hilltop headquarters here, has presided over the establishment of a sophisticated military apparatus in Central America.

While President Ronald Reagan and his top advisers say the use of U.S. military force in the region is an unlikely and undesirable last resort, the military is prepared for contingencies, according to mili-tary officers and diplomats in Washington and Central America.

Authorities say this has been ac-complished with a vigorous tempo of war games, construction of stag-ing areas and listening posts, the creation of an elaborate intellience network and a major effort to fortify allied armies.

The U.S. military presence, once devoted almost exclusively to de-fending the Panama Canal, has been expanded in the name of protecting stability throughout Latin America. More recently, the officials say, its focus has narrowed on Nicaragua, which the Reagan administration believes is the main threat to peace in Central America.

The military officers and diplomats said in interviews that the buildup of the Southern Command, one of six regional com-mands of the U.S. military worldwide, is now largely complete and that it is adequate to carry out any likely emergency in the region.

These officials also challenged what they called the apparently popular belief that if the United States were drawn into direct military involvement in Central America, it would inevitably lead to a quagmire like the Vietnam War.

According to U.S. military and intelligence assessments presented at the highest levels of the govern-ment, the United States could quickly and easily rout the Sandinists who govern Nicaragua.

U.S. military officials say the activities at the Southern Command is prudent preparation if U.S. involvement becomes necessary.

"I can say with some confidence that the exercises have provided us with a significantly improved capability to operate in the region," said Colonel Charles Pearcy, who heads the command's task force in Hon-Some critics, on the other hand,

Video Battle By Peter Perl

Weshington Post Service WASHINGTON — United Airlines is sending videocassettes to its nearly 5,000 striking pilots in which company executives urge them to end their 20-day-old walkout or risk being permanently replaced.

The video parcels mailed to pilots' homes this week represent an escalation in the battle for the loyalty of the members of the Air Line Pilots Association. The union has been using videocassettes, a televi-sion production crew and satellite "teleconferences" to maintain solidarity within its ranks.

This is a public relations war as much as anything else," said Chuck Novak, a United spokesman.

"We think their sending out the desperate," said David Jewell, a union spokesman. "They are having a hard time getting pilots to cross the line, and they are not having an easy time getting re-

The union said 6 percent of its pilots, whose average yearly salary is \$86,000, have crossed picket lines since the strike began May 17. The strike has resulted in the grounding. of 85 percent of United's flights.

The use of television and video production is increasingly common among U.S. labor unions and companies seeking to communicate with the work force. But United's confrontation with the pilots union presents the most coordinated use to date of video technology during a labor dispute, said Larry Kirkman, executive director of the Labor Institute for Public Affairs, the AFL-CIO's \$3 million-a-year video operation.

Mr. Kirkman said the proliferation of video recorders and the ease of satellite hookups have created an "electronic union hall."

The Air Lines Pilots Association, among the wealthiest of unions, has spent more than \$500,000 on three slickly produced satellite conferences designed to maintain support for the strike among union families. Each conference has been beamed

eader invites about 10 pilots to his

Mr. Jewell said the union videos include "news and propaganda" as well as financial advice, information on health insurance and footage of strike-related events.

United's video includes a May 28 news conference outlining the company's position on the strike, in-cluding executives' plans to hire 300 new pilots per month to rebuild

The union called the strike in response to United's attempt to inaugurate a two-tier wage system that would have paid new pilots lower wages than veterans. That conflict was resolved when both sides approved a lower pay scale for new pilots that will remain in place for five years. Arbitrators will decide after that whether the separate scale will be maintained.

But the talks broke down later over back-to-work issues, including United's refusal to hire 566 newly trained pilots who declined to cross picket lines when the strike began. United is also seeking to reward the estimated 250 union members who crossed picket lines by giving them higher seniority than veteran pilots who went on strike.

U.S. Discusses Force in Nicaragua

(Continued from Page 1)

Ikle said, "We know from experience that that doesn't work." In general, the Reagan administration has demanded that Nicaragua demilitarize, cut its ties with the Soviet Union and Cuba and change its form of government to a

phiralistic democracy.

But many officials in both the Nicaraguan and U.S. governments believe the prospects are remote that the Sandinists will adopt policy changes that would be satisfactory to the United States.

"They are hellbent on pursuing their policy," Mr. Ikle said. "The idea that you can strike a deal with them seems unrealistic." In a speech in April, Mr. Ortega said: "The United States still doesn't understand that this is an irreversible revolutionary process.

Here, there can be no backward In the months and years ahead, a Senate aide said, if further diplomatic sanctions are tried and fail, the military option may seem more tempting. "If you try everything and none of it works," he said, "then eventually you have everyone

Taxing a Bit More Fairly

led things in the wrong order.

It would have been more useful had he introduced a so-called neutral tax reform redistributing the tax burden in the interests of justice and economic efficiency, not for revenue purposes - early in his first term and gone slow on his initial dash to lower taxes all around. The leap over the high tax wall left the economy with grazed knees: It dragged the budget into huge structural deficit and did not, despite its supporters' assertions, stimulate higher private saving from which the deficit could be financed. So America had to borrow massively from abroad, which sent its exchange rate into vertical takeoff and rendered many of its producers uncompetitive.

The present tax-revision proposals are generally sensible, though less than ideal. Ostensibly aimed at reducing the tax burden on the poor, the honest and the small by closing loopholes for the wealthier, the plan already concedes more to the self-interest lobbies than had been hoped. The main beneficiaries of lower taxes would be some of the poor - not the very poor who pay no taxes but whose benefits have been truncated in recent years - and the rich. Business, in total, will have to contribute more, but whether in the long run this is a shift of real after-tax income from corporations to individuals is uncertain: Higher business taxes have the habit of being passed on to the individual through higher prices, particularly when times are reasonably good.

In seeking tax reform at this point in his presidency, Ronald Reagan may have tack-tem into a perfect one is about as easy as tem into a perfect one is about as easy as making a silk purse out of a sow's ear. The present imperfect reform risks being watered down further as the lobbies operate in Congress. This is why we regret that reform was proposed so late in the administration's life, when fewer politicians will be ready to do favors for a departing president.

When pressure is exerted to weaken the reform still further, should the administration yield, intent on getting some of its proposals through and hoping to fill the gaps later? Or should it resist the pressure at the risk of running out of time?

One cannot tamper continuously with a tax system without impairing the confidence on which the prosperity of a market economy depends. Corporations and individuals need to know with some certainty their future tax liabilities. Had the present reforms — or a stronger version of them — been introduced early in the first term, they could have been fought over during a reasonably long period. Now they must be hurried through, with diminishing bargaining power among the proponents and growing strength

- or grease - to the elbows of the lobbies. The strategy has been wrong. There are flaws in the proposals. But they are better than nothing. All politicians who clamor for a better American tax system (it is already better than in most countries) should sup-port them and resist the onslaught of the pressure groups who see their favorite loopholes being tightened.

INTERNATIONAL HERALD TRIBUNE.

Proper Aid to the 'Contras'

Again. Congress is grappling with the Nica-raguan "contras," whom it left in April without American support. The choice in the House is between the Democratic plan of Representative Michael Barnes and the Republi-can plan of Representative Robert Michel. The Barnes plan takes the American finger off the trigger of the insurgency: It repudiates the Reagan resort to force, bars military aid and makes relief available to contras only as international wards outside Nicaragna. The Michel plan keeps the American finger on the trigger: It offers "humanitarian" aid — a euphemism for logistical aid to a force whose military needs are met by others — to contras operating inside Nicaragua. Both plans undertake to sacilitate diplomacy, encourage a Nicaraguan political dialogue and induce a purge of the contras' Somoza and criminal elements.

The Michel plan appears to be a moderate option. It keeps faith with Nicaragua's good democrats without directly refueling a controversial military intervention. But it is onesided on the wrong side. It rests explicitly on the threat of renewing support for an interven-

tion discredited by four years of experience.

The Sandinists have used the intervention to rally Nicaraguan opinion and substantial international opinion to an otherwise flagging cause. The contras have inflicted damage in the countryside but have yet to apply anything near the pressure that would compel the regime to "say uncle," President Reagan's stated goal. The likeliest danger now is a sharpening of Sandinist border clashes with Honduras and Costa Rica. U.S. involvement, to protect these clients from reprisals brought on by their if it permitted Nicaragua's Latin neighbors support of American policy, is a growing risk. The Barnes plan might not force many insurgents to quit Nicaragua. Those who did

military force while on relief, like Afghans in Pakistan. The Sandinists would understand this. The Sandinists also understand a second Barnes lever: His plan carries only until Oct. 1 and then promises the president an expedited hearing on a new proposal. This would provide

a space, and incentives, for bargaining.
The administration's unilateral embargo of Nicaragua let Managua play David to the American Goliath. Latins, Russians and members of the Atlantic alliance are filling in. We still feel the embargo was a useful expression of the U.S. commitment to ensure that the Sandinists respect their neighbors, loosen their ties to Havana and Moscow and move toward pluralism. In any event, a stick, once applied, becomes a potential carrot. The coming months must be used for a diplomatic effort.

The immediate need is to head off a widening war at Nicaragua's borders. This can best be done by imposing the border controls draft-ed by Mexico and its partners. Nicaragua has long been ready. Honduras and Costa Rica have held up, at American bidding, largely because mutual respect for borders would cut off the contras. This is the moment to end this dangerous game. Once borders are formally sealed, the questions of levels of arms, advisers

and maneuvers become more manageable. And what of Nicaragua's good democrats? Intervention has not helped them, though the Barnes plan does implicitly keep that option available. Within Nicaragua, enough pluralism still remains to spark a resurgence. The softening of war hysteria could help, especially and other foreign democrats the opening in Managua that has largely been denied them.

-THE WASHINGTON POST.

Other Opinion

A Long Mideast Process

If the American-Jordanian-Palestinian meeting comes off, it will clearly be intended by both sides as a prelude to direct Israeli-Arab negotiations, though much will depend on the credibility of the Palestinian statements. These are the very methods Israel has always canvased as the only proper ones for resolving the conflict.

Prime Minister Shimonl Peres, though he may play hard to get for tactical reasons, will surely be anxious to take up the [Jordanian] king's offer, and may not be too sorry if he fails to carry his foreign minister along with him. Yazhak Shamir, after all, is cast as Mephistopheles to Mr. Peres's Faust. At some time before October 1986 Mr. Peres will want to part company with him, and invite the electorate to judge between them. The two sides are

approaching decisions they have avoided for nearly 40 years. We should not demand, or expect the earth from Israeli or Palestinian in what will be a long, delicate process.

- The Times (London).

Time to Rebuild the Pentagon

This should be the year in which Congress comes to grips with the need to reorganize the Pentagon. Legislators and the public are nearing an end of their patience with a system that received 49-percent increases, after inflation, during President Reagan's first term and now devours \$300 billion annually, yet can't quit crying. The complaint about ending Pentagon waste and abuse does not cut to the heart of the problem. The issue is restructuring the military command, especially the Joint Chiefs. - The Boston Globe.

FROM OUR JUNE 6 PAGES, 75 AND 50 YEARS AGO

1910: Anti-Trust Suits Hurt U.S. Stocks NEW YORK - It is believed that the bottom has not yet been reached in Stock Exchange operations. The present situation has nothing to do with the country's general prosperity. which continues unabated. The cause is the inability of the financial magnates to judge how the government's anti-trust proceedings will end. This feeling must continue until the Supreme Court delivers its verdicts on the Tobacco and Oil Trusts suits next winter. There are 1,200 corporations with more than \$10,500,000 capital who are liable to penalties under the Sherman Anti-Trust Law, If the Court holds the Tobacco and Oil Trusts to be illegal, this fact places financiers in a highly nervous state and makes the Stock Exchange subject to depression on the slightest indication of renewed anti-trust warfare.

1935: Hull Urges Effort on Free Trade PARIS - Secretary of State Cordell Hull. who has pursued his policy of seeking to break down barriers to trade undeterred by the conflicting clamor, criticism and theories of other members of the Cabinet, has made a fresh statement of sound policy, which happens to be virtually in the form of an invitation to other nations to cooperate with the United States in encouraging commerce. He does not go so far as to call for a new international conference. But he does call for what he terms 'simultaneous effort" to re-establish price structure, to secure currency and exchange stability, and to remove quota restrictions, import licenses, exchange controls and other obstacles to trade. Mr. Hull's proposal follows an appeal for currency stabilization by Secretary of the Treasury Henry Morgenthau Jr.

Soccer: The British as Europe's Bad Children

MONACO — Television feeds us with rich, bloody food these days. On the same evening, we see aggression in Beirut and aggression in a Brussels soccer stadium.

THURSDAY, JUNE 6, 1985

In the Middle East, the aggression is not mind-less; it is politically and religiously motivated. In Brussels, we saw a display of lethal stupidity. Meanwhile, the dead are dead and are past

wondering why they had to be killed. As T.S. Eliot put it, they are folded into a single party and accept the constitution of silence. People of my generation were brought up to

believe that organized games were a means of purging animal high spirits which might otherwise be harmful to society. That was supposed to apply to the spectators as much as to the players. We now see how hopelessly untrue that supposition was. We assume now that a football match is an opportunity for unleashing partisan violence. and we use protective devices to prevent the violence from going 100 far. Riot squads, mounted police, barbed wire, brick walls proclaim that football is no longer a family entertainment. It is an excuse for a containing wall.

The supporters of the Liverpool team playing

in Brussels — when 38 persons were killed in a wall collapse when the Liverpool fans charged supporters of Juventus, an Italian team — did not hate the Italian fans. They had nothing against them in terms of usual pretexts for mass aggression, Nobody could write a book about Liverpool wanting to wage war against Turin. The British were not even being chauvinistic toward the Italians.

There was merely an excess of animal energy that found a focus and a target. Any focus and any target would do. An international soccer match provided a marvelous pretext for violence. Young people like violence. They cannot use

their energy to create so they use it to destroy.

The Liverpudlians did not mean to take human lives. They did not know what their aggression would lead to. They just did not think. They were and are stupid.

Unfortunately, they represent merely the latest and most destructive wave in a shameful history. As an Englishman living on the continent, I am sick sometimes of belonging to a race that, in the name of sport, exhibits on foreign soil a pretty wide spectrum of human degradation. By Anthony Burgess

The French and the Belgians and the Germans wonder what has got into the British. They are disgusted by flailing fists, knives, cursing and blasphemy, drunkenness and vomiting, theft and vandalism. I would feel more tolerant of all this if the genuine Europeans, not just the offshore islanders, exhibited the same symptoms of aggressive imbecility. But they don't. It is the British who are regarded as Europe's bad children. Why is this? Cleverer men than I have failed to

The French and the Belgians and the Germans wonder what has got into the British. They are disgusted by flailing fists, knives, cursing and vandalism.

explain what has gone wrong with the race once

noted for its gentleness, good sense, humor and tolerance. We are told that the unthinking British resent being part of Europe and show their resentment in bringing out knives and improvised truncheons against harmless Europeans. That hardly explains the aggression that is a regular element of spectator response on British soil. The game itself, wherever it is played, has become an excuse for cracking skulls.

The leftist sociologists may interpret stadium violence as an expression of resentment at the Conservative government of Prime Minister Margaret Thatcher and its acquiescence in grow-ing unemployment. The young, they will say, are frustrated and have to vent their rage somehow. Rage is best vented when you become part of a mob: You forgo personal responsibility for it and have the delicious sensation of stripping yourself of inhibitions and morality you learn at your mother's knee. The rage becomes both abstract and personally satisfying. Mob violence has always been part of world culture. Britain's great achievement was traditionally the repression of it through concepts such as fair play.

It is only soccer that brings out the beast in its young spectators. Neither cricket nor rugby has this effect. Anthropologists tell us that the big round ball was really a human head that was kicked around. (In 1660, after the monarchy was restored in England, the head of Oliver Cromwell, who had dethroned a king, was dug up and

booted about until it was mush).
But I don't think there is anything in the game itself that predisposes to partisan violence; rugby is a far tougher sport. It just happened that soccer attracts the biggest crowds. Big crowds are make Make are accountly given to make the second at the biggest crowds. mobs. Mobs are naturally given to violence.

Mobs can also overpower the sources of order. We saw that clearly enough in the Brussels stadium. It would have been a fitting tribute of public outrage at the violence to abandon the match. But if the match had been abandoned there would have been an uncontainable riot. Organized society gave in and was pragmatically right to do so. It was not morally right. Morality should have decreed a cancellation of the game.

Some television channels in effect canceled it by refusing to show it. It was a good game, but few of us were able to enjoy it. We couldn't help thinking of certain people who had been booted into the stadium of the next world.

We have not finished with soccer violence. The organization governing soccer competition in England announced, after its head had met with Mrs. Thatcher, that no team under its jurisdiction would play in Europe next season. Later, the soccer association governing European soccer banned English club teams indefinitely from European competition. But all this does not really solve the problem of soccer violence.

Wherever and whenever the British do play, all that can be done is to impose more and more techniques of containment: more police, more barbed wire, more guns at the ready. The game itself should be banned, but that is not going to happen. Any British government pondering the outlawing the great game will have to fear working-class displeasure and a loss of votes.

All we saw in Brussels was abysmal stupidity. And against that, not even the gods can fight.

This comment, by the author of "A Clockwork Orange," "This Man and Music" and other books, was contributed to Newsday.

For a More Rational Debate on Military Spending

By Sam Nunn

The writer, a senator from Georgia, is the ranking Democrat on the Armed

WASHINGTON — For the past four years the U.S. national security debate has focused on two underlying themes: how much the defense budget should grow each year and how much U.S. military forces have improved since President Jimmy Carter left office.

A shift in this myopic debate is overdue. The reference point for measuring improvement should not be the 1980 defense posture but current military needs and objectives.

America is faced with zero to 3 percent annual military growth, after inflation, for the foreseeable future. So meaningful benchmarks are essential, if difficult. The Reagan administration and Congress must focus on the real challenges that should guide

national security decisions.

Following the U.S. expenditure of about \$700 billion on NATO-related forces since 1980, can the North ritory? The recent description by the supreme allied commander, General Bernard Rogers, of NATO military posture as one that requires the release of nuclear weapons "in terms of days, not weeks or months" is a good starting point for examining America's NATO defense posture.

 Can the United States meet the rigorous requirement of defending interests in the Gulf that have been defined as vital by both Presidents Reagan and Carter? Does America have the strategic mobility, on-thescene allies and clear military strategy required to defend an area 7,000 miles (11,375 kilometers) from home against Soviet aggression?

 Are U.S. mobilization goals appropriate and achievable? Should Americans continue to base their mobilization objectives on developing the capability to fight for months in Europe when U.S. allies would start to run out of ammunition in less than two weeks and NATO's war plan calls for 30-day sustainability?

· Will any level of defense spending provide the United States the capability to meet the requirements of the administration's three-and-ahalf-war strategy? (Defense Secretary Caspar Weinberger has testified that the administration's "long-term goal is to be able to meet the demands of worldwide war including concurrent reinforcement of Europe, deployment to Southwest Asia and the Pacific, and support for other areas." Has the "strategy-capability gap" narrowed over the last four years with the expenditure of \$1 trillion on the military? Will this gap close with the planned expenditure of \$1.3 trillion over the next four years?

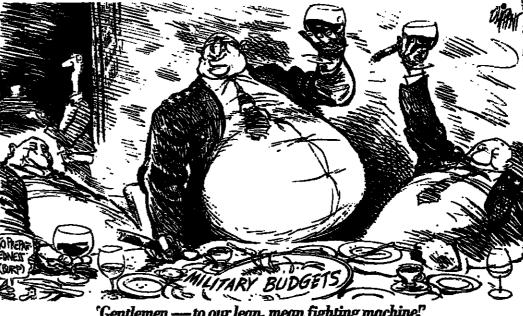

Defense experts will differ in their answers to these questions, but certain conclusions are inescapable:

 Current U.S. military strategy as set forth by Mr. Weinberger has little relationship to present capability or foreseeable resources,

 U.S. military planning is out of sync with that of America's allies, and its mobilization goals are out of sync with NATO abilities and plans. Even using the "Are we better off

now than we were four years ago?" benchmark, the answer is "yes," but not in proportion to the dollars spent, The U.S. force structure (army and marine divisions and air force wings) is essentially the same, though the navy has added some ships. The readiness of the nation's forces has improved primarily because of the increased quality of their manpower. The ability to sustain a war has improved, but is far short of announced goals. Modernization of weapons systems is under way, but is in jeopardy in a no-growth environment.

To justify increased military spending, Mr. Weinberger frequently displays charts that show how Warsaw Pact nations are outproducing NATO members in various categories of weaponry. He has a point. In

Gentlemen — to our lean, mean fighting machine!

1984, NATO produced 1,760 tanks. Atlantic Treaty Organization meet the requirements of defending its tersaw Pact produced 3,650 tanks, 3,200 artillery tubes, 700 rocket launchers

and 1,070 fighter aircraft. Yet NATO has consistently outspent the Warsaw Pact for the past decade and a half, especially over the last four years. This raises some tough questions. If the alliance nations are already outspending the Warsaw Pact but are getting so badly outproduced, how can this problem be cured? Moreover, is it the administration's goal to match the Warsaw Pact tank for tank, plane for plane? If so, how, and at what cost?

Unless the administration and Congress refine their military objec-

U.S. and allied military output, deincreasingly fall into the same disreare now in. The recent budget debate and congressional votes on defense indicate that trend is well under way.

Americans must recognize that de-fense spending has leveled off after five years of growth. It is likely to stay that way until the public and Congress are convinced that the deficit is being reined in and that increased military spending can really narrow the gap between U.S. capabilities and strategy. In approaching national security with a new realism, several

essential steps must be taken:

• U.S. defense planners must re-Congress refine their military objectives and concentrate on the overall ern strengths and Soviet weaknesses.

 They must coordinate weapons fense in the 1980s and 1990s will programs with those of U.S. allies to increasingly fall into the same disrepute that many domestic programs they must ensure that the allies are marching to the same war plans.

• The Pentagon procurement system must be exposed to a strong dose of free-enterprise competition and accountability. The production of low-priority weapons must be stopped and the number of new

weapons produced must be limited. Americans must insist that the Reagan administration define the Strategic Defense Initiative realisti-

cally to avoid public disillusionment. And reforms must be carried out in the structure of the military services, the Joint Chiefs of Staff and the Defense Department itself.

The Washington Post.

For East Asia, a 10,000-Year Reign?

of Yonsei University, South Korean students are rehearsing a peasant dance that combines earsplittingly amplified gong-and-drum bashing with intricate leaping and much shouting.

Only when the students take a breather can one hear - at almost equal volume - a tape of Stevie Wonder singing a recent hit, "I Just Called to Say I Love You." The metaphor is irresistible: East

Asia's boom is drowning out the sounds of the West. Japan's powerhouse is being joined — some might say challenged — by most of the nations of the region. Led by what Prime Minister Lee Kuan Yew of Singapore likes to call

the "chopsticks civilizations" (South Korea, Taiwan, Singapore and Hong Kong), noncommunist East Asia is taking off. Malaysia, Indonesia and Thailand are also chalking up records of steady growth, rising per capita income and minimal inflation.

Japan's economic success has been well documented. But the surge of the rest of East Asia has been less well publicized. To this reporter, back in Asia after nearly 20 years in Western Europe and the United States, the area's progress comes as a shock.

Out here, change is constant. Europe seems static in comparison. The old leaders of Asia (Sukarno, Park Chung Hee, Ho Chi Minh, Mao) are gone, and so are the old skylines. There are flashy skyscrapers and ultramodern office buildings now where squat concrete buildings stood two decades ago. There are traffic jams (BMWs

and Mercedes-Benzes locking horns with Datsuns and Toyotas) where trishaws once trundled California-style ranch houses have re-placed reed huts, and Paris-styled

SEOUL — Not far from this wooded hilltop on the campus By Robert K. McCabe ready-to-wear clothing hangs in

place of sarong kebayas and cheong-sams in a million Asian wardrobes. An Asian middle class has emerged, happily gorging itself on fast food (McDonald's and Wendy's seem everywhere), staring at ubiquitous but dubious color television (in Manila, I watched National Football League films with growing unease until I finally found they were of the 1979 playoffs) and driving shiny new sedans with the brio of Grand Prix racers.

Asians more and more are enjoying today — but they are not forgetting tomorrow. Their children are getting much better educations than their parents did. Taiwan is spending 19.5 percent of its total public outlay on education; South Korea, 16.3 percent, Indonesia, 16.1 percent. And Thailand? An incredible 26 percent.

Behind all this, of course, is steady economic growth. Recent figures indicate Taiwan's economy is climbing at 11 percent a year, and South Korea is matching this. Singapore is at 8 percent.

There is a black spot: the Philippines. Last year, faced by political uncertainty, the country's gross na-tional product contracted by about 5 percent; its economy is in serious trouble across the board. But the rest of the area is averaging better than 5 percent growth a year.

Income figures are rising too. Brunei's \$20,800 per capita income. is difficult to deal with when one remembers that a few decades ago, before its major oil finds, it was a struggling little British colony. Ja-pan's \$7,109 figure is still East Asia's best, but Hong Kong's \$5,316 and Singapore's \$5,219 are not far behind. One projection says Singapore's per capita growth rate will surpass that of the United States by 2001.

And while growth extends, infla-tion is in check. South Korea's inflation rate is about 2.5 percent a year, and Taiwan's is 1.4 percent. Others: Thailand, 3.8 percent, Malaysia, 5 percent, and Singapore, 6.3 percent. Hong Kong, at 10 percent, and Indonesia, at 12 percent, are not doing as well. The Philippine rate is close to 50 percent.

Provocatively, the healthy economies are something less than free. At least some government regulation is the norm, whether it is called "state capitalism," a "mixed economy" or simply "planning." And with this goes a degree of political restraint, most conspicuously in South Korea, though the governments in Taiwan and Singapore can be quick to show their teeth. But for Asia's millions, the Pacif-

ic revolution has brought more benefits than burdens. U.S. trade with Pacific nations surpassed U.S.-European trade in 1980 and now runs at nearly a third more. Odds are that Pacific links will continue to expand. Four of the world's greatest powers (the United States, the Soviet Union, Japan and China) are Pacific nations. By 2010, more than 60 percent of the world's population will be living around the so-called Pacific Rim.

It was Douglas MacArthur, of all people, who on Leyte back in 1944 said that "Europe is a dying system. ... The lands bordering the Pacific. with their billions of inhabitants. will determine the course of history for the next ten thousand years." Ten thousand? A bit strong perhaps. But the Pacific Revolution

may become one of the most significant phenomena of our times. The writer, a deputy editor of the International Herald Tribune on leave, is a specialist in Asian affairs.

Tax Reform: With Justice For Some

By Hobart Rowen

W ASHINGTON — In its hard sell for tax reform, the Reagan administration has done its best to make it appear that everybody, or practically everybody, is a winner

Treasury Secretary James A. Baker 3d claims the tax program will boost economic growth by an additional 1.6 percent by 1995. But he decided, and wisely, not to crank that computer-generated figure into the tax compu-tations, "so we couldn't be accused of cooking the books."

What the Treasury Department did not advertise was that there would be a fairly painful transition. I was provided by officials with some details of the control of the con details of the computer projection. One negative: Housing starts would drop sharply, by 8.5 percent in 1986, 487, 7.0 percent in 1988, and 3.9 percent in 1989 from projections based on current tax law. Housing starts would not recover to the point they otherwise would have reached until 1993 or 1994. For all the president's glowing lan-

guage about economic growth and incentives, the unemployment rate would show no improvement, compared with present expectations, until 1995, and even then the gains would be minimal.

There would be significant changes in the composition of gross national product: Real fixed investment by businesses would grow by an extra 4.5 percent by 1995, and both inflation and interest rates would be down by a little more than a percentage point, compared with existing law.

Computer runs are not the end of all wisdom, to be sure. In the coming weeks there will be a raft of private analyses, and results may differ. But the computer analysis produced for the Treasury Department is enough

to show that a lot of the administra-tion's rhetoric is wishful thinking. Moreover, there is reason to be suspicious of the claim that the current proposal is "tax neutral." Dan Rostenkowski, the Illinois Democrat who chairs the House Ways and 🗭 Means Committee, estimates that by 1995 there would be a net loss of \$12 billion annually, whereas the Trea-sury Department's first reform plan would have picked up \$13 billion.

So the current plan may be a new tax-reduction proposal that would add to, not minimize, the budgetdeficit problem. A major share of the benefits goes to the working poor, helping them recover from the 1981 tax law, which was biased against them. But the biggest cut goes to the very wealthy. Not only do the rich— who got the lion's share of the 1981 tax cut - benefit enormously from a reduction in the top rate from 50 percent to 35 percent, they get a huge bonus through a cut in the capitalgains tax from a maximum of 20

percent to 17.5 percent.

A study by the Center on Budget and Policy Priorities based on Treasury data shows that the average annual tax cut for those making more than \$200,000 a year would be \$9.254, while the cuts for those in the \$10,000 to \$50,000 income brackets would be from \$128 to \$211 a year.

But the key question is v new plan will, as the Reagan administration contends, stimulate growth especially through new capital formation — and generate additional revenues. The same supply-side argument was made in favor of the 1981 tax-reduction plan, which in fact eroded the tax base so dramatically that huge budget deficits are assured

for the rest of this decade. The administration's casual promise of greater economic growth, translated into Mr. Reagan's glowing image of a new and stronger America, is based on the econometric exercise showing a 1.6-percent extra increase in real GNP growth by 1995, and also on the president's untested assumption that all Americans will work longer and harder if they can keep a

greater share of their earnings. "I can't prove it," says one of the Reagan tax-reform architects, "but common sense tells you that this bill will increase growth much more than 1.6 percent]. It will enhance labor productivity. Because in a world where the workers believe the system is more fair, it will reduce worker

"From a Keynesian standpoint, there ought to be a favorable effect on consumption and growth. From the supply-side view, there ought to be benefits from investment. So over time, the system ought to be more efficient, more neutral."

From the standpoint of the industries now enjoying tax benefits, from real estate to the "rust belt," neutrality means pain. Property values have been grossly inflated by the tax system, which gave some old-line com-

panies a "negative" tax rate.

But an abrupt shift into a new system could shake the economy. And the proposal would establish a new set of inequities. We are a long way from the principle of true tax reform that treats all income equally.

Beirut Camp in Ruins, Visitors Say

Palestinians' War-Damaged Sabra May Be Uninhabitable

By Ihsan A. Hijazi New York Times Service

BEIRUT - The destruction in Sabra, one of three Palestinian settlements besieged by Shiite attackers for nearly three weeks, is so extensive that the refugee district may no longer be habitable, according to visitors to the camp in the last two days.

They said many Sabra residents

were sleeping on sidewalks outside the settlement, in a southern suburb of Beirut.

Sources close to the United Nations Relief and Works Agency for Palestine Refugees said that more than half the houses in the settlement were not safe to live in, and that most of the rest had been dam-

Officials from the relief agency, which looks after hundreds of thousands of Palestinian refugees in Lebanon and other Middle Eastern countries, have not been able to inspect the two other settlements, Chatila and Borge Barajni.

Red Cross workers have evacuated 93 wounded Palestinians from Borge Barajni, but they have been

Militiamen of the Shiite Amal attacks by gnerrillas hiding in tunmovement and soldiers of the Leb-nels. An Amal fighter said the tunanese Army's 6th Brigade took con-trol of Sabra last week and have occupied much of Chatila. They have Borge Barajni under siege.

The three settlements contain 30,000 people. Perhaps as many as 20,000 other Palestinians live in Mosiem quarters near the makeshift settlements.

Visitors to the area said women, children and old men were sleeping on sidewalks around the Berrut Arab University, outside Sabra. Others said said 160 Palestinian families had moved into the shell of the building that once housed the U.S. Embassy on the scafront.

The seven-story embassy building was severely damaged by a suicide car-bomber in April 1983. It is close to the headquarters of the Druze militia of the Progressive Socialist Party, which, although an ally of Amal, did not join the offen-

sive against the settlements. Palestinian guerrillas in the hills above Beirut have been firing barrages of artillery shells and rockets against Shifte positions.

JOHANNESBURG - Police officers were watching the patients register at a large hospital for blacks in Port Elizabeth when a young man came in with shotgun wounds in his

An Indian doctor with sharp eyes, Mandikat Juta, later described how he leaned across to the admissions clerk and declared: "This is Dr. Brown's gardener. Injured himself with a screwdriver. Admit him to my ward."

Dr. Juta, of the Port Elizabeth hospital staff, said he has been smuggling patients into his ward and treating them secretly for two months because the police in eastern Cape province, where most of South Africa's prolonged racial unrest has been, keep watch at all the region's hospitals to arrest any black person admitted with gunshot wounds. The mere fact of such a wound, especially from a shotgun,

regarded as evidence that the person was involved in a riotous crowd that clashed with police, Dr. Juta said.

The wounded person is immediately placed under arrest, and an armed guard is posted at his bedside. According to

Dr. Juta, some patients are handcuffed to their beds, When the patient is discharged from the hospital, he is taken to a police cell, then to a court to be charged with riotous behavior.

Dr. Juta and a white doctor in private practice in Port Elizabeth, Gavin Blackburn, gave this account of police action regarding blacks injured in unrest in the region, where at least 129 persons have died since March 21, at a meeting of concerned doctors and paramedics held last week in the Medical School of Johannesburg's Witwatersrand Universi-

The meeting was called by the National Medical and Dental Association of South Africa, which broke away from the officially recognized Medical Association of South Afri-ca because of the latter's failure to act against the doctors who treated Steve Biko, the black consciousness leader, before he died in police custody in 1977.

The medical and dental association's easiern Cape branch

has protested at what it regards as police interference with doctor-patient relationships.

It issued a statement recently accusing the police of intimidating and arresting patients in hospitals, of placing

about 650 members throughout the country compared with 6,000 in the officially recognized group — said sections of the hospitals where the wounded blacks were treated were closed to the public. Catholic priests had been told they could not go into these sections to administer last rites to dying patients, the statement said.

The association said that many wounded blacks had gone without treatment because they were alraid to go to the hospitals and were turned away by nervous private doctors. A lew had tried to operate on themselves to extract shotgum pellets, resulting in infections. Some patients had died through lack of medical attention.

Asked to comment on the allegations, a spokesman at police headquarters in Pretoria said: "Since we do not know the parameters of the Kannemeyer Commission's terms of reference, we are unable to comment. The Kannemeyer Commission has been investigating the

police shooting of 20 members of a black crowd near the town of Uitenhage on March 21. The South African authori-ties have said that they should not comment on this incident until the commission has reported.

Judge Donald Kannemeyer, who headed the five-week investigation, handed his report to President Pieter W. Botha on Wednesday. Details of his findings were not revealed.

general conditions relating to unrest in the region.

Dr. Juta said he was one of "maybe three or four" doctors out of a staff of 120 at Port Elizabeth's Livingstone Hospital who had tried to circumvent the police net to treat patients clandestinely. He said they risked their jobs as provincial government employees, and added: "I might even be dismissed for addressing this meeting."

Dr. Blackburn said he was one of several private doctors who had set up a rudimentary clinic in a church hall in Uitenhage, where they attended to wounded blacks who were afraid to go to the hospitals.

"We have no sterile facilities," Dr. Blackburn said. "There is no hot water, no X-ray equipment, so we don't know where the bullets are to extract them. There really isn't much we can do except give the patients penicillin injections."

Dr. Juta said he had done a voluntary stint at the church hall and realized that it was imperative to get some of the patients to a hospital. "The only way," he said, "was to do something irregular and improper. I admitted them to my ward under a false

As an example, he said he had admitted one patient whose jaw had been shattered by a bullet as a case of "right facial

"The police had taken over the first and second floors of the hospital, and I was on the third floor, so they didn't really know what was going on up there," Dr. Juta said. "The main

problem was to stop the nurses from talking." Dr. Juta said he found the behavior of the police in the wards "unnerving."

"They walk about the hospital in camouflage fatigues carrying Sten guns and automatic rifles," he said. "They smoke where there are no-smoking signs. They play cards in the wards, and they fingerprint patients pre- and post-

Turkish Excavations Indicate Pace of Early Culture

By John Noble Wilford lew York Times Service

RCHAEOLOGISTS have dis-A covered the remains of 10,000year-old stone buildings in southeastern Turkey that are believed to be among the earliest examples of formal architecture, and important evidence of rapid cultural changes when human societies moved from hunting and gathering to farming and living in villages.

Excavations of the three buildings revealed terrazzo floors, wellpolished stone, a carving of a human face and pilasters for decorative rather than structural purposes. The craftsmanship so surprised the archaeologists that at first they thought they might have come upon some Greco-Roman ru-

These discoveries were announced last week by the University of Chicago, Istanbul University in Turkey and Karlsruhe University in West Germany. Archaeologists from the institutions participated in the excavations, which were directed by Robert J. Braidwood of Chicago and Halet Cambel of Istanbul.

Dr. Braidwood, a professor emeritus at the Oriental Institute of the University of Chicago, said in a telephone interview, "What I think we have here is the first evidence

that changes began to happen much faster than we realized once people began controlling their own food supply through agriculture."

The age of the village was estab-lished through the standard carbon-dating process. Inside one building, apparently the oldest structure ever discovered that was erected for non-domestic purposes, the archaeologists uncovered a scene as mystifying as it was macabre. On the floors of two small rooms they found the burned tops of about 50 human skulls, presumably the remains of a death rite. The presence of communal

buildings with decorative flour-ishes, Dr. Braidwood said, suggest-occurred 10,000 to 12,000 years ishes, Dr. Braidwood said, suggested that the people living in the ago, scholars of prehistory mought village had advanced to a level of cultural change had still proceeded at an exceedingly slow pace. encountered in explorations of early agricultural societies. River, on the Anatolian plateau about 30 miles (50 kilometers) north of the city of Diyarbakir, The on the other side of the stream." In 1963 archaeologists at Cayonu began uncovering the traces of domestic dwellings representing a 10,000-year-old settle-

As early as 1970, scholars began to suspect that the people in that area had developed construction skills much more advanced than their nomadic forebears.

The building in which the skulls were found measured 26 feet by 23 feet (8 by 7 meters) and has a foundation of a local limestone that had been roughly finished. In the large room was a one-ton slab of wellpolished stone not commonly found in the area. Two other buildings were of a similar size and

Whether the purposes of these communal buildings was sacred or secular is not yet clear, Dr. Braid-

But the architectural techniques used in their construction indicated to archaeologists that these people had these cultural attributes:

Tiny Fungus Family Emerging as a 'Cornerstone' of Plant Life

By Erik Eckholm New York Times Service

LITTLE-KNOWN family of A fungi that inhabits the roots of nearly all the world's plants is in-spiring superlatives from an in-creasing number of scientific ad-

The fungi can be found, says one biologist with only a little hyperbo-le, "on every grain of sand, in every gram of soil from the arctic to the tropics." Accounting for 15 percent of the weight of the world's plant roots, they make up the greatest mass of any group of microorganisms on Earth.

They're the biological link be-tween the plant world and the soil world," said Hugh Bollinger, vice president of NPI, a biotechnology company in Salt Lake City, Utah.

The fungi enter roots in symbiotic partnerships, called mycorthizae, that send threadlike hairs out into the soil, multiplying the host plant's ability to gather nutrients by 10 times or more.

Their crucial role in sustaining rain forests on poor tropical soils is only now being uncovered. A re-cent report of the National Academy of Sciences called the fungusroot symbiosis "the cornerstone of mineral conservation by natural

tropical forests." dream of finding — or creating in per and zinc. The extra hairs extend the laboratory — superstrains of the plant's reach and also break fungi that could transform forestry down insoluble minerals that and agriculture.

With research in its infancy, scientists already foresee all sorts of

wheat, cutting the fertilizer needs soils, the application of mycorrhiof vegetables, restoring strip-mined zae could cut the often heavy reland and raising cheaper Christmas quirements for fertilizer and water. trees. Third World scientists hope The current costs of applying the the adroit application of these fungi will permit the cultivation of huge infertile zones in the tropics

The cultivation of these funfungi or their equivalent in chemical fertilizers are about equal, but
prices should shift in favor of the
grass or other weed. But scientists and the regreening of burned-over

Mycorrhizae is the term for the growths that result from mutually beneficial associations between plant roots and any of hundreds of species of mycorrhizal fungi. There

are two main types.

Ectomycorrhizae are hairy mantles that form outside the surface and between the cells of the roots of many conifers and some hardwoods; some send mushrooms or puffballs above ground during their life cycle.

Far more common and present in most crops are endomycorthizae, which grow inside the root cells and send microscopic strands known as hyphae outside the root wall to suck in water and nutrients.

The filaments extend up to 3 inches (7.5 centimeters) into the soil, often increasing the plant's effective root surface by 10 times. They contribute especially to the uptake of phosphorus, one of the major nutrients needed by plants. Biotechnologists have begun to and of such trace elements as copwould otherwise be unavailable.

Experiments have shown that in addition to enhancing nutrition, the fungal partnership increases plant resistance to drought, salinity, acidity and diseases.

In the 1970s, as the unheralded services these "bionic fertilizers" provide were recognized, some scientists predicted an agricultural revolution. Several corporations funded mycorrhizal research. But improving on nature has proved

For now, according to John A. Menge of the University of California at Riverside, commercial use of the fungi is feasible in three specialized areas. First, inoculation of seedlings with the fungi can promote revegetation of sites such as strip mines and roadsides, where natural fungus populations have been destroyed.

Second, the fungi can be added to soils in nurseries and orchards where fumigation, often required to kill pests, has also suppressed the fungi. Some citrus nurseries al-ready apply the microorganism, but numerous other fruits and veg-etables grown in fumigated soils may also benefit from the proce-

Chinese Stamps Raise Revenue For Aid to Pandas

BEIJING — The Chinese government has donated 100,000 yuan (\$35,000) for rescue work to save the endangered panda, the official Xinhua news service report-

The Associated Press

The money was raised by the Posts and Telecommunications Ministry from the sales of four commemorative stamps issued on May 25 that depict pandas, Xinhua said Tuesday.

Li Guiling, secretary general of the Chinese Wildlife Conservation Association, was quoted as saying 41 sick pandas were found last year, with 26 nursed back to health

the arrow bamboo. The bamboo began to blossom and then to wither in 1983 over large areas where

Hoping to find wider agricultur-

al uses, researchers are sorting through known species of the fungus, searching for strains that pro-duce more filaments faster or that can better tolerate hot, cold, dry, acidic or other stressful conditions.

Winter wheat, for example, which is planted in the fall for harvest the next summer, derives little benefit from the fungi because it does not become infected with them until late spring. The fungus species naturally associated with Great Plains wheat cannot function in cold temperatures, Barbara Hetrick of Kansas State University has discovered.

Dr. Hetrick is searching for fungus varieties that can withstand lower temperatures and that could,

if injected along with the seeds, give young wheat plants an extra boost About 100 different species of endomycorrhizal fungi have been named, eight or nine more are discovered each year and hundreds more are believed to live in the tropics. The qualities of only about half a dozen have been seriously investigated to date, according to Mr. Menge. Several hundred species of ectomycorrhizal fungi have

been identified. Eventually, superstrains of the fungi may be created by gene splic-

With genetic engineering, I think we could do all sorts of mi-raculous things." said Mr. Menge. "We could probably even create mycorrhizae that fix nitrogen. But until we can test them it's just talk." Work on genetic manipulation

Cancer Fighter **Moving Toward Human Trials**

New York Times Service

NEW YORK — A rare natural substance that has excited international interest because of its apparent ability to destroy cancer cells without harm to normal tissues will probably be tested in humans for the first time this year, scientists report.

The substance is called tumor necrosis factor. It was discovered 10 years ago by researchers at Me-morial Sloan-Kettering Cancer Center here and is thought to be a key part of the body's natural defenses. Although it is found only in minute amounts in living animals and humans, the substance is now being produced artificially by gene-splicing techniques, a recent development that promises to make available a large supply.

Cancer scientists and spokesmen for biotechnology companies say their main hope is that tumor necrosis factor will prove to be a powerful anti-cancer agent with low toxicity. Conventional cancer chemotherapy is often almost as damaging to normal tissue as it is to the

Dr. Herbert F. Oettgen of Memorial Sloan-Kettering expressed a mixture of caution and hope. He said it would be worthwhile to test both the biosynthetic material and natural tumor necrosis factor to see and 15 dying.

There are an estimated 1,000 giant pandas threatened by a rare flowering cycle of their main staple, be treated successfully with any conventional methods and yet whose diseases are not so far advanced as to make any treatment

practical applications. These in-clude boosting yields of winter are grown in sterilized artificial of government guidelines to regulate field experiments. Since the fungi are so universal, associating with weeds as well as crops, some fear that a runaway superstrain grass or other weed. But scientists believe they will be able to develop safeguards against such disasters.

"At this point it's not really necessary to play with genes," Mr. Bol-linger said. "There may be some fantastic varieties out there in na-

A huge impediment to research has been the inability of scientists to grow endomycorrhizal fungi, the most common type, in a pure culture in the laboratory.

"The fungus gets something from the plant that we can't dupli-cate in a petri dish," lamented Dr. Hetrick Instead, symbiotic associations must be nurrured on the roots of living plants, a cumbersome, expensive and time-consum-

Finding a way to culture the fungi independently "is the Mount Everest of mycorrhizal research," said

a British expert, Barbara Mosse. In contrast, the biologically simpler ectomycorrhizal fungi, found on pines, other conifers and some hardwoods such as oaks, can be cultured. This is one reason why they are already in limited commer-

cial production for application by

In the late 1960s researchers in Pennsylvania studying the revegetation of coal mine wastes noticed a certain type of puffball sprouting around the healthier trees. These turned out to be shoots of an extraordinary species of ectomycor thizze that flourishes even in harsh,

acidic soils. Infected with this species, trees planted on mine wastes are three times as likely to survive, according to Charles E. Cordell of the U.S. Forest Service. A private company now markets the fungus, and more than 1,000 acres (400 hectares) of strip-mined land in Ohio and other states have been regreened with its help. Timber companies are examining the merits of inoculating all their seedlings with this fungus,

Mr Cordell said. The association of plant roots with mycorrhizal fungi was first described at the turn of the century Gradually, botanists discovered just how ubiquitous the phenomenon is. But its importance to plant welfare was not widely known until

recently. "Even 10 years ago, many soil scientists wouldn't admit that mycorrhizae had any effect on plant nutrition," said Mr. Menge. "Now they agree that plants pick up 90 percent of their phosphorus by this

IN BRIEF

Ceramic Bone Substitute Used in Ears

MIAMI (NYT) - A ceramic substitute for natural bone, called Bioglass, has been used for the first time to repair the middle ears of human patients, Dr. Gerald Merwin of the University of Florida Health

Science Center reported. Implants of Bioglass in the ears of 16 patients in the previous 14 months resulted in good to excellent improvement in hearing, he told a recent meeting of the American Otological Society in Miami. Bioglass is a transparent ceramic material invented by Dr. Larry Hench of the Univer-

Because the substance resists rejection by living organisms and bonds with natural tissue, it has found wi particularly in the repair of hip and thigh bones. It is also a candidate material for implanted tooth replacements.

Illinois Nuclear Accelerator Starts Up

ARGONNE, Illinois (AP) — The ATLAS, for Argonne Tandem-Linear Accelerator System, a \$20-million nuclear accelerator, has begun

The accelerator strips atoms of some or all of their electrons and accelerates them to more than 30,000 miles (48,280 kilometers) a second. Then the nuclei of the atoms are smashed into each other. Scientists at the Argonne National Laboratory, operated by the University of Chicago for the U.S. Energy Department, use sophisticated detectors to observa-

those collisions, hoping to learn more about atomic behavior.

Officials said one practical use for ATLAS is to have streams of speeding atoms drill microscopic holes in a screen for purifying blood. The holes in the screen trap diseased blood cells, but allow normal cells to pass through. ATLAS can also measure rare forms of naturally occurring radioactive elements that disappear over time, allowing scientists to determine the age of fossils. The same method can be applied to fix the ages of polar ice caps, meteorites and geographical features, such as lakes

Heart Disorder in Fetuses Is Treated

NEW YORK (AP) — A potentially fatal form of irregular heartbeat in fetuses has been successfully treated by giving medicine to their mothers, according to Dr. Charles Kleinman, associate professor of pediatrics at the Yale University School of Medicine.

Digitalis alone or in combination with verapamil or propranolol was given to the mothers and ultrasound scans were used to monitor fetal response, Dr. Kleinman said. Of 15 fetuses so treated, the heartbeats of 14 returned to normal in the womb and no recurrences were reported in years after birth, he said.

Dr. Kleinman said the disorder treated, known as supraventricular tachycardia, stemmed from a defect in the system that regulates heartbeat, rather than from structural problems in the heart. If not treated, it could lead to such conditions as congestive heart failure, in which the heart is unable to pump out all the blood returned to it, and to bleeding disorders and infection.

Sailing Tanker Improves Fuel Savings

TOKYO (AFP) — The 26,000-deadweight-ton Usuki Pioneer, the first sail-equipped ocean-going bulk carrier, has returned encouraging fuel saving figures and has proven its stability in its first commercial trans-Pacific voyage, its designers said.

The Japan Marine Machinery Development Association reported that the voyage, from November 1984 to January, took the ship through the stormy seas of the northern Pacific where wind speaks a verse between

stormy seas of the northern Pacific, where wind speeds average between

stormy seas of the northern ractric, where wind speeds average between 11 to 45 mph (18 to 72 kph) in winter.

The association had anticipated fuel savings from the sails in the region of 10.5 percent, but the ship's performance showed savings of nearly-double this figure, or 20.5 percent, the report said. The ship's two computer-controlled parallel aerofoil type sails were used for about 72 percent of the voyage against the 70.5 percent originally planned.

Agency Cautions on Clove Cigarettes

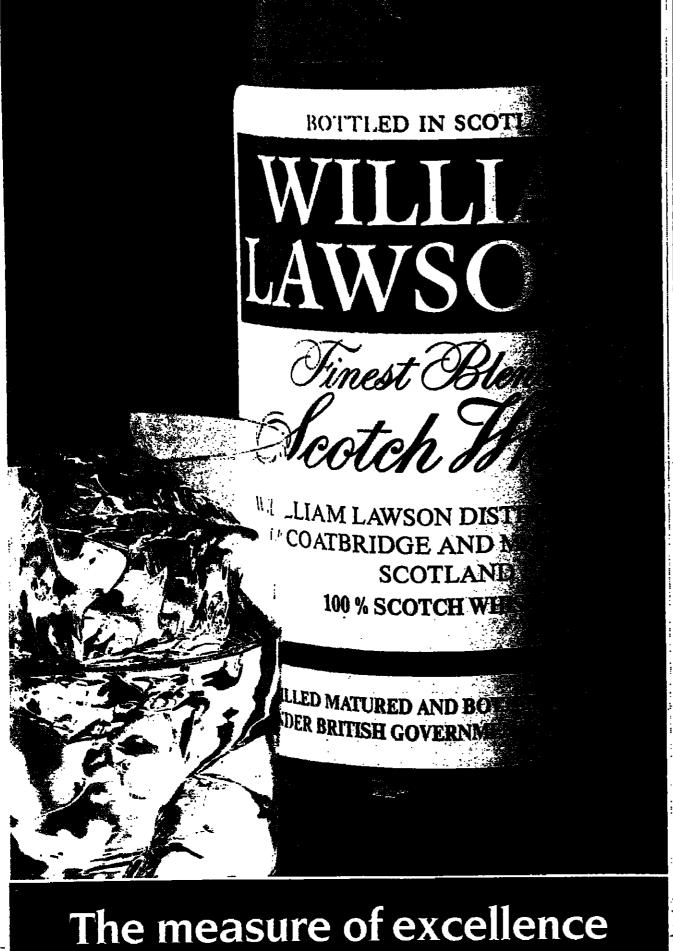

ATLANTA (AP) — Clove cigarettes, smoked by more and more young Americans, cause the same heart and lung diseases as conventional cigarettes and may cause other problems as well, according to The

Centers for Disease Control.

The health agency said it has received reports of 12 people with severe respiratory illness possibly associated with smoking clove cigarettes, which contain the spice as well as 60 percent tobacco. Symptoms included coughing up blood, spasmodic lung contractions and fluid in the lungs, sometimes within hours after smoking the cigarettes. Milder symptoms include nausea, angina, respiratory infections and chronic cough.

Eugenol, the major active ingredient in cloves, is used as a dental anesthetic. Dr. Sue Binder, a researcher with the agency, pointed out that there was not yet sufficient evidence to determine what health effects may

there was not yet sufficient evidence to determine what health effects may be associated with it. U. S. sales of clove eigarettes, which are imported from Indonesia, increased from 12 million in 1980 to 150 million in 1984. Most purchasers are between 17 and 30 years old, the agency said in its Morbidity and Mortality Weekly Report.

WALL STREET WATCH

Battle Lines Are Drawn On Defense-Stock Outlook

By EDWARD ROHRBACH

ARIS — Like Clint Eastwood's peculiarly amused character "Dirty Harry," the Reagan administration is strong on defense. Investors, too, have made their day in the sector, up almost double the Dow average so far this year. Opinion is divided, however, over how much more the stocks can

throw their weight around, with apparently no real growth ahead now for the U.S. defense budget.

"Basically, the United States has been rearmed," observed Alan Benasuli, who covers the industry for Drexel Burnham.

"The military cycle, which dates back to 1978, is tired. Backlogs and margins are peaking."

Some analysts see

a war of attrition

ahead for defense

stocks.

While recommending that investors "take profits on any strength" that the pure-mili-tary issues show, with the exception of General Dynamics, he emphasized "a new element more important than the mili-

tary cycle or fundamentals." There's a tremendous restructuring and consolidation wave rippling through the iff-dustry," he said. "At least 10

companies in the past year have been bought or are in the process of being bought. There's a new deal every week. It's where the

R. Benasuli admitted he does not know white again for will strike," but thinks it is a worthwhile game for investors to play, because of the 30 to 50 percent premi-R. Benasuli admitted he does not know "where lightning um to shareholders in a takeover.

He suggests a package of stocks, notably in the defense electronics field where growth is faster and the companies small-er. Watkins-Johnson heads his list, coupled with Loral & Sanders Associates. He also sees acquisition possibilities among the defense suppliers, citing SPS Technologies, Precision Castparts, Rohr Industries, Hexcel and Moog.

Raytheon is the "most attractive" of the stocks he does not

think are merger targets. "Earnings are re-accelerating and mili-tary backlogs are rising," he said. "Also, not too many people like Raytheon, so there's room for it to be bought."

However, George Shapiro of Salomon Brothers sees defense issues, particularly the large prime contractors, moving forward on Wall Street across a broad front. He has been strongly recommending the group for six weeks.

"Valuations are cheap and fundamentals are firmly entrenched, even with a no-growth defense budget," he asserted. Enough funds have been appropriated to keep backlogs growing for several years. Over the next six months earnings will be very strong in the group, against a backdrop of poor profits being reported elsewhere in the economy."

Price/earnings ratios of defense stocks relative to the rest of the stock market are selling now at a 30-percent discount, Mr. Shapiro said, "at the low end of their historical range, with some issues discounted closer to 40 percent."

His favorite valuation play is McDonnell Douglas. United Technologies and Boeing are the second and third choices. Also at current price levels he likes Lockheed, General Dynamics and

Paine Webber's Joseph Campbell perceives defense stocks caught in a kind of no-man's-land. He is not strongly recommending any, although Lockheed, Rockwell and Northrop are rated "attractive."

"It's unclear now what the public will be willing to pay for these stocks," he said, pointing out that the price pattern has been for the issues to recover sharply in the summer and fall after all the fighting words are spent in Congress in the first months of the

year about slashing the defense budget.
"But in 1985 that may not happen," he added. "The (Continued on Page 9, Col. 3)

Exchange Voting Is Split

Ownership Rule Changes in U.K.

By Colin Chapman

International Herald Tribune
LONDON — Members of London's Stock Exchange on Wednesday approved a change of rules allowing international financial companies and other outsiders to purchase full control of stockbrok-

ing and trading firms.

But they did not give the necessary 75-percent support to a consti-unional amendment to the rules that would permit the gradual shift of ownership of the exchange from the 4,495 members to firms or companies. The change would have al-lowed shares in the exchange to be freely traded.

Some leading exchange members said that the defeat would not senously impair the exchange's restructuring, which is centered on a plan to introduce competitive com-mission rates rather than fixed charges by late next year.

"It's not a tremendous upheaval," said Ron Brew, chief executive of the stockbrokerage of Grieve-son, Grant & Co. "It's just messy. Some genius will now have to come

up with a better idea." The split outcome means that the exchange must find ways for large institutions to nominate individ-uals as members without there being a clear market in exchange memberships.
About 82 percent of those voting

supported the change in ownership and control of member firms, with 3,929 voting in favor and 681 against. This vote ends a rule limiting outsiders to a 29.9-percent share in member firms. Most of Britain's larger stockbrokerages aleady have agreed to be purchased by banks and other outsiders.

The result was seen as only a (Continued on Page 13, Col. 7)

Securitization: Regrouping Assets To Create New Sources of Money

By Fred R. Bleakley New York Times Service

NEW YORK - A decade or so ago, when banks and thrift institutions were awash with mortgages, someone decided to group the mortgages into pools and then sell shares in those pools. The technique gave bankers the cash to write still more mortgages and it created a new security that ordinary investors could buy and

These days, increasing numbers of companies and financial institutions are raising money by devising novel equivalents of the mortgage pools and selling them to the public:

 Sperry Corp. recently borrowed \$192 million with debt backed by leases on computers. The regular rental payments from companies leasing the Sperry computers go to pay down the debt.

Several big banks have sold pools of automobile loan receivables. The banks continue to

service the loans, but principal and interest are passed through to investors.

• International Paper Co. has put certain timber properties in trust and is selling participa-

tions. The buyers get a portion of revenues from timber cutting, plus tax advantages traditionally enjoyed in the timber business.

• UAL Inc., the parent of United Airlines, announced last Friday that it would spin off some of the botels it owns into partnership trusts

to be sold to the public. Investors in the trusts would share what the botels earned.

In one variety or another, all this is called the "securitization" of assets, and the process is "the hot new game in creative financing," said M. William Benedetto, director of investment bank-

ing at Dean Witter Reynolds Inc. "The mind boggles at the number of things you can do."
Indeed, among the other possibilities that Wall Street already is working on are pools of small business bank loans, credit card receivables and

natural resource properties.

"By going down the balance sheet, asset by asset, companies and financial institutions are able to open up a whole new field for funding," added Gordon B. Pattee, a managing director of Merrill Lynch Capital Markets.

Asset-based financing has been around for years, but has been largely the province either of troubled companies hard-pressed to raise cash quickly or of commercial banks selling business loans to one another. Banks and automobile finance companies have for some time packaged pools of car loans for sale, but their efforts ocused on private sales to institutional inves-

Investment bankers credit a ruling by the Fi-nancial Accounting Standards Board that took effect at the start of last year with sparring the current boom in asset financing. Although the subject now is being re-examined by the FASB, subject now is being re-examined by the FASD, the rule-making body of the accounting profession, the board detailed the steps necessary to undertake this type of financing, much of which is not reflected on the balance sheet.

The ability to raise cash that otherwise might not be available — or available at comparable

cost - is based on the principle that, in general, the parts are worth more than the whole. Instead of asking investors to evaluate the

overall strength of a company's balance sheet, (Continued on Page 9, Col. 3)

Spot Oil Prices Weaken as U.K. **Cuts Its Quote**

LONDON - Free market oil prices continued to weaken last month, 1.5 million barrels be-Wednesday as Britain's sta-te-owned oil corporation an-nounced an expected cut of \$1.25 a stuck to official OPEC prices. barrel in the price of the key Brent blend of North Sea oil.

Despite weak prices on the spot market, however, traders say other producers outside the Organization of Petroleum Exporting Countries say many companies are in the pro-are hesitant to make a move. The cess of restructuring debts and othrecent steady fall in spot, or noncontract, prices has increased pressure on the Soviet Union, Mexico erament projects have been postand Egypt to grant substantial price cuts to contract customers.

British National Oil Corp. said it would cut the price it pays to sup-pliers for Brent blend to \$26.65 a parrel from \$27.90, reflecting steadily falling rates on the European spot market. On Wednesday buyers offered \$26.20 for a barrel of the same blend delivered next month, compared with \$26.35 a barrel Tuesday.

The corporation's monthly supplier prices are based on the average price received for sales during the preceding month. Industry estimates of the volume of crude oil covered by the new supplier price for June varied from 120,000 barrels per day to 300,000 barrels per day. Britain's North Sea oil output is now about 2.7 million barrels a

Traders said the price cut would have little impact on the market as the British government has announced the impending closure of the corporation, which is now winding down its operations and trading a much smaller volume of oil than before.

Meanwhile, industry sources reported that Saudi Arabia, its oil output at a 15-year low, has threatened to use its huge oil market muscle as OPEC's largest producer to bring into line members of the organization that are exceeding their quotas or cutting their prices.

Oil ministers and delegates who attended OPEC's ministerial council in Taif, Saudi Arabia, this week said there was a clear warning that Saudi Arabia was tired of cutting back on output while others ex-ceeded OPEC quotas and cut prices. One delegate said King Fahd of Saudi Arabia told the came established, notably in devel-OPEC producers sell as much oil as opment institutions in industrial countries, thriving on meetings and they can at any price, then others will also be free to do as they

to about 2.8 million barrels per day which are more than \$1 above spot

The Saudi economy has been showing signs of strain from low production for some time. Bankers ers have gone to the wall. Real estate prices have numbled and govponed, delayed or abandoned.
An economic slowdown was in-

evitable after the rapid years of development in the 1970s and the government says most of the necessary infrastructure work in the economy is now complete.

But after two years of big budget deficits, the government earlier this year signaled concern that it may have been eating up the country's foreign reserves too quickly and said it would balance the budget.

Bankers estimate between \$10 billion and \$20 billion of its reserves, now estimated at \$100 billion, were used up in 1983 and

Even so, Saudi Arabia would not lightly decide to turn on the oil taps. Oil Minister Ahmed Zaki Yamani said last week that it was not in Saudi interests to engineer a large fall in prices and boost pro-

Shell to Buy Oxy Oil Assets

LOS ANGELES — Occiden-tal Petroleum Corp. said Sheil Petroleum N.V., a principal holding company of the Royal Dutch/Shell Group, has agreed to buy 50 percent of Occidental's oil interests in Colombia for about \$1 billion, of which \$750 million in cash will be paid

upon closing of the sale.
Occidental said the two companies expect the closing to be on or about July 1.

It said the sale involves all of the stock of Occidental's Columbia-Cities Service Petroowns 50 percent of Occidental's interest in an association con-

Study Says Distortions Curb Third World Growth managers, savers and investors These countries "were comfort-

By Carl Gewirtz International Herald Tribune

PARIS —"A legacy of economic distortions" is the main reason most developing countries will fail to reach real, or inflation-adjusted, growth rates of up to 7 percent or more over the long run that should issued Wednesday by the Group of

fessor Helen Hughes, a former senior official at the World Bank who is now executive director of the Australian National University. The Group of Thirty is a nonprofit organization which explores the basic problems in the functioning of the international economic sys-

NEW YORK — The New York Stock Exchange was above its record closing high late. Wednesday in heavy volume, aided by lower interest rates, a cut in crude oil prices and prospects for low inflation.

The Dow Jones industrial average was up 8.07 to 1,323.36 about an hour before closing. Advances led declines by a 3-2 ratio among the 1,976 issues traded.

Five-hour Big Board volume amounted to Although prices in tables on these pages are from the 4 P.M. close in New York, for time reasons, this article is based on the market at 3 P.M.

about 118.3 million shares, compared with about 92.4 million in the same period Tuesday. New closing highs for the New York Stock Exchange composite index and Standard & Poor's 500-stock index established Tuesday prompted early buying, analysts said.

Although it was expected, British National Oil's cut in the price of Brent crude by \$1.25 a barrel pushed bond prices ahead on the rationale that the lower oil prices will help keep inflation low. The falling interest rates renewed the vigor of the stock market's climb, analysts the vigor of the stock market's climb, analysts said.

"Stocks are playing catch-up with the bond market." said Peter Furniss of Drexel Burnham Lambert. The extended rally in the credit markets, especially over the last month, and consequent mortgage rate declines confirm a lower nterest rate environment, he said.

Mr. Furniss said that the lower interest rates

coupled with expectations for lower oil prices with low inflation bodes well for stocks. Lower yields on fixed-income securities also may en-

courage some people to take their profits in bonds and get back involved in equities, he said.

Mr. Furniss noted that some institutional investors remain concerned that the cause for the lower interest rates is a weakening economy. But he said that the rates show the Federal Reserve is taking "positive action" to aid the economy. He said that another discount-rate cut is immigent and that another discount-rate cut is imminent and that another round of

cut is imminent and that another round of prime-rate cuts is in the offing.

Alfred Goldman of A.G. Edwards & Sons in St. Louis called the market's action impressive.

"Every time the market pulls back a little, the buyers come roaring in," he said. "The momentum says we are going higher."

Noting the Dow's 80-point climb over the past four weeks, Mr. Goldman said that the market does not seem to want to give back gains.

"That indicates that there is still money that wants in and that investors who already own stocks are comfortable holding them." Mr. In the credit markets today, prices of long-term government bonds, which move in the opposite direction from interest rates, moved up more \$5 to \$10 for every \$1,000 in face value. On the trading floor, BankAmerica was ac-tive but off marginally. The bank said Tuesday that it expects to break even in the second

quarter. Standard & Poor's lowered its rating on BankAmerica's commercial paper. Litton also was active, but unchanged.

Toshiba Sees Net Rising 8% to a Record in Year

TOKYO - Toshiba Corp.'s consolidated net income will rise 8 percent to at least a record 93 billion yen (\$373 million) in the fiscal year ending March 31, 1986, Yuni-chi Yamada, vice president, predicted at a press conference

Group sales are expected to rise 12 percent to 3.73 trillion yen and

GM, NHK Join To Make Parts

TOKYO - General Motors Corp. will team up with a major Japanese spring maker to develop and produce car suspension systems in Japan using a new plastic 50 percent lighter than steel, officials in Tokyo said

Wednesday.
The U.S. automaker and NHK Spring Co. reached an agreement in March to set up the joint-venture company by the end of this year, said Koichi Sasaki, an official of NHK Spring's overseas planning de-Dartment

Mr. Sasaki said it would be the first time that GM has ever teamed up with a Japanese company to produce auto parts in Japan. NHK will own 55 percent of the venture but both sides will contribute technology to the manufacture of the systems, which will be built using fiber-reinforced plastics, Mr. Sasaki said.

tor sales rose 45 percent. Home appliance sales rose 13 percent, including a 38-percent rise in exports and a 7-percent increase

Wang Sees 4th-Period Operating Loss, Plans to Cut Work Force by About 5%

LOWELL, Massachusetts — Wang Laboratories Inc., the U.S. computer company, said Wednesday it expects a fourth-quarter operating loss and a year-end adjustment in inventory values. The

company also said it plans to cut its work force by about 5 percent. Wang said the cuts in its labor force will start immediately. The company added that it has "delayed salary and wage increases for six

months, and taken other actions to reduce operating costs."

As previously reported Wang reported profit of \$124.4 million for the nine months ended March 31, down from \$136.4 million a year before. It had fiscal 1984 profit of \$210.2 million, including a gain of \$41.7 million on offshore manufacturing exemptions. But the company said it expects to show a profit for all of fiscal

1985 despite the expected fourth-quarter loss.

For the third fiscal quarter, Wang reported net income of \$17 million, on revenue of \$552.7 million.

In a statement explaining the projected loss, Wang said that because preliminary April and May results reflected lower than anticipated savings from programs to reduce expense growth, the company is not expected to be profitable from operations in its fourth

In addition, it said, "the lower than expected levels of business have resulted in accumulations of inventories which will require valuation adjustments at year-end."

Reed International Profit Rose 11.5% in Fiscal 1985

LONDON - Reed International PLC said Wednesday that pretax percent of capital employed. profit in fiscal 1985 rose 11.5 percent to £107.5 million (\$136.5 million) from £96.4 million last year. Reed said that improved perfor-

mance in its U.S. publishing concerns made up for the decline in domestic profit. Weakness of the British pound contributed £7 mil-lion to an £18-million increase in overseas profit. Reed said.

Reed, a holding company with publishing, decorating, newsprint and other paper-related interests in Europe and North America, said that revenue was £2.12 billion, up 3.9 percent from £2.04 billion for fiscal 1984. Exceptional costs for restructuring of operations amounted to £5 million, half the Drevious year.

The company said that its Reed Publishing division generated 45

this sector accounted for just 21

Reed said that its Calmers publishing business in the United States had been particularly successful. Substantial investment also was reported in electronic database publishing.

The Consumer Publishing division, mainly magazines, books and advertising, was affected by sharply increased paper costs and a strike by journalists.

British paper mills had a loss of £3 million in the first nine months of the year, but returned a profit in the last quarter.

In April, Reed said it was selling its Crown and Sunworthy wallcovering operations to Borden Inc. And Reed has said it is seeking buyers for the companies in its building products group.

U.K. Government Is Said to Approve Plans for BL-Honda Cooperation

Agence France-Presse

LONDON — The British government has approved a five-year, £1.55-billion (\$1.97-billion) investment program for BL PLC that would lead to increased cooperation between it and Honda Motor Co., The Financial Times said Wednesday.

The plan provides for BL's Austin-Rover division to begin assembling Honda cars next year at Longbridge, near Birmingham. The Japanese company plans to market those cars in the European

[Britain's secretary for Trade and Industry, Norman Tebbit, told Parliament on Wednesday that Honda and BL had made important proposals for collaborative projects, but he declined to give any details. He said that the government would later announce its corpo-rate plan for BL, Regters reported from London.]

Under the plan, Austin-Rover and Honda also are to jointly produce a medium-sized car called the YY. And Austin-Rover is to produce a small car with a Honda gearbox and an engine to be made in Britain by Honda, which is building a plant at Swindon.

The government was said to have been influenced by two factors: that adoption of a Honda engine would cut £250 million from the plan's costs, and that cooperation with Honda would be desirable from the standpoint of BL's short-term profitability ahead of the

planned sale of the state-owned automaker. BL is 99-percent owned by the British government, with the remainder held by private shareholders. The company has declared its intention to return all subsidiaries to private-sector ownership.

COMPANY NOTES

American Telephone & Telegraph Co. said that it has agreed to pay \$55 million for Communications Satellite Corp.'s 50-percent interest in three U.S. Earth stations used for international satellite

Carter Hawley Hale Stores Inc., a Los Angeles-based retailer, said it plans to spend about \$650 million during the next five years on a program that will involve the opening next year of 37 new stores in the United States and a major modern-

ization of existing stores.

Chyoda Chemical Engineering & Construction Co. is leading a group of Japanese companies that Thai Oil Refinery Co. said had made the

lowest offer, \$180 million, to expand a refinery.

Daimler-Benz AG's planned takeover of Dornier GmbH, West Germany's second-largest aerospace company, has been approved by the Federal Cartel Office, a spokesman for the office said. Dairnler is taking a 65.5-percent

Pan-Electric Industries Ltd. said that it has withdrawn from an agreement to acquire Singapore's Adelphi Hotel from Adelphi Development Pte. for 77 million Singapore dollars (\$34.8 million).

Union Carbide Corp. and Iwa-tani & Co. of Osaka have agreed to lakeover attempt.

establish an industrial gases joint venture in Japan. The U.S.-based chemical company said that it would take a maximum 25-percent ownership in Iwatani Industrial Gases and provide it with applications, distribution and production

technology.
Unocal Corp. has sued four insurance companies for allegedly canceling \$100 million in liability insurance policies on its directors the day after T. Boone Pickens disclosed his 7.9-percent interest in the Los Angeles-based oil company. Unocal alleged that the companies intended to cancel the cover-

Regrouping Assets to Raise New Funds

(Continued from Page 7)

investment bankers are plucking out specific assets as the collateral and source of income to support the issuance of new securities.

"In many cases, the asset is of a higher quality than the credit of the underlying issuer," said Daniel Kearney, a managing director of Salomon Brothers Inc.

The packages either take the form of debt securities, in which a

fixed amount of interest and principal is returned to investors, or of equity-type investments, whose return is based on a fluctuating amount of income from the underlying asset.

Lower-cost financing usually is available when specific assets back up a security. In the case of Sperry, the lease-backed agreement was accomplished at a cost of less than half a percentage point over a comparable Treasury issue, whereas the cost of capital for a standard fi- in charge of his company's new helping to raise its stock price nancing "would have been considerably more expensive," said Anthony V. LIMA — Peru and Mexico, the two largest producers of silver in the world, will join forces to boost the metal's lagging price, President Fernando Belaunde Terry of Peru has an-

Fernando Belaunde Terry of Peru has announced.

Mr. Belaunde, in a Monday night press conference, said he had talked by telephone with his Mexican counterpart, Miguel de la Madrid, and they agreed that the two countries "must and will do everything within our reach to improve the price for silver and invigorate our respective national economies."

Mr. Belaunde said one of the measures will be the issuing of silver certificate notes to Peruvians. The Peruvian Congress last week approved the measure although a minimum value for the notes has not been set.

notes has not been set.

Peru also will mint silver commemorative coins. Mr. Belaunde said.

Meanwhile, the government's National Statistics Institute said first quarter mineral production rose 8.5 percent and oil production

went up 3.6 percent.

The report attributed the improvement to increased demand for iron, fewer labor strikes and a slight rise in prices for industrial metals.

Strikes in the first quarter caused a loss of 261,400 man-hours, 79.5 percent less than lost work time a year earlier, the institute said.

LONDON, OCTOBER 24-25, 1985. sixth annual International Herald Tribune/

Oil Daily Conference on "Oil and Money in the Eighties" will take place on October 24 and 25 in London. The theme of this year's conference is "Surviving in a Competitive Environment". The program, designed for all senior executives in energy and related fields, will address the key issues affecting the current energy situation and assess future trends and strategies.

For full details, please contact the International Herald Tribune Conference Office, 181 Avenue Charles de Gaulle. 92521 Neutlly Cedex, France. Telephone: (33-1) 747-12-65, Ext. 4568. Telex: 613595.

IN THE NAME OF EUGENICS: Genetics and the Uses of Human Heredity

By Daniel J. Kevles. 436 pages. \$22.95. Alfred A. Knopf, 201 East 40th Street, New York, N. Y. 10022

Reviewed by Christopher Lehmann-Haupt

AT A SUPERFICIAL glance, one might judge the subject of eugenics to be a dead one. After all—as Daniel J. Kevies points out in the preface to "In the Name of Eugenics" though the word was coined in 1883 from the Greek root meaning "good in birth" or "noble in heredity," it came in time to have extremely ugly connotations.

Indeed, the practice of eugenics would seem to have been discredited once and for all by the uses to which it was put in Nazi Germany, which, as Kevles's history reminds us, were not just isolated aberrations, but the culmination of elitist, racist tendencies at work from the late 19th century onward. Who in these enlightened times would want to re-invoke a theory of racial stereotypes, or return to the practice of sterilizing people judged from a narrowly eliust point of view to be defective by

virtue of their genetic endowment?
And yet, as Kevies' seamless narrative proceeds to show, we may now be back at the point where we started, except that our language is a good deal fancier — instead of "eugenics" we have "genetic engineering" and our methods are vastly more sophisticated - from simple sterilization we have come to amniocentesis and abortion, with recombinant DNA techniques not too far down the road.

And if any readers think that the issues are clearer now, let them argue with the French geneticist Jérôme Lejeune, who deplores the practice of aborting victims of Down's syndrome, and says that he looks forward "to the day when a mongolian idiot, treated biochemi-

cally, becomes a successful geneticist."

How we got from there to here is a river of historical narrative that flows straight and smooth in Kevles's study of the past 100 years or so, and is given particular continuity by his use of the past tense even when he is writing about events that seemed to have happened only yesterday. Yet the landscape through which he takes us achieves extraordinary vari-

There are the many striking personalities who have been attracted to the study of heredity during its controversial development people like Francis Galton, the Victorian scientist who coined the word engenics and founded the faith in its promise for the perfec-

tion of mankind; or J. B. S. Haldane, the inexhaustible English polymath who led the resetion against the excesses of eugenes; or Karl Pearson, the Fabian biometrician raised by a Quaker father so pleasure-densing that on vacations he would force his son to follow along on fly-fishing tramps but instruct him not to east if fish were about. Keyles writes with gusto about these people, particularly about their backgrounds. It is almost as if he wanted to belie the notion that humans can be reduced to

their biochemistry. There are scientific concepts to be absorbed - Gregor Mendel's law of secregation and independent assortment, the statistics of biometry, the process by which it was finally discov. ered that humans possess 46, not 48, chromosomes. Kevies draws them into the scenery as if they were nothing more complicated than

rocks and meadows. There are two banks to his river, one Enelish, the other American. Keyles writes about them both because, as he accurately sums it up, the comparative approach has helped to explain certain important features of this history — for example, why a engenic legislative program succeeded at least partially in the United States but not at all in Britain — that would otherwise have remained puzzling.

He adds: "I have also attempted a critical assessment of Anglo-American cugenicists as they diversely recognized themselves before the Nazis came to power; and the assessment has led me to depart from prevailing interpretations to advance the view instead that eugenics involved not only scientific rationalizations of class and race prejudice but a good deal more, including disputes over how men and, especially, women of the modern era were to accommodate to changing standards of sexual and reproductive behavior."

Kevies, who teaches history at the California

Kevies, who teaches history at the California Institute of Technology, was led to write "In the Name of Eugenics" in part by what he learned from the subject of his previous book, "The Physicists: The History of a Scientific Community in Modern America," which won the National Historical Society Prize in 1979. Physicists were not prepared to face the issues of nuclear energy that suddenly confronted them in 1945, and geneticists are no better prepared for the coming revolution in their field, even though it may be comparable in magnitude and more imminent than they now. have reason to expect.

This assessment effectively dampens any sense of wonder we might feel at the prospects for the future outlined in this history. The genetic design of a human perhaps within a hundred years? Gene therupy for people by the end of the charter? The right to abort a victim of Tay Sache disperse to a perhaps and a second to a second t of Tay-Sachs disease tomorrow? After reading "In the Name of Eugenics," we don't know whether to gasp in awe or gulp in terror. Contrary to Galton's grand visions of progress. we end up feeling no better about the future of mankind than did our most optimistic ancestors. And if they were to see the results of what they envisioned, they would not feel optimistic

Christopher Lehmann-Haupt is on the staff of The New York Times.

Letters by Dr. Johnson, Boswell Found The Associated Press

CANBERRA — A researcher cataloging rare books after a fire at the National Library says she has discovered two letters by the 18thcentury author Dr. Samuel Johnson and his biographer, James Boswell. They were pasted into one volume of a first edition of Boswell's "The Life of Samuel Johnson," published in London in 1791.

BRIDGE

By Alan Truscott

ON the diagramed deal, South landed in four spades and would have been defeated if West had led his singleton club. But West, not unnaturally, wanted to weaken the declarer's trumps and led a heart. East took the ace and returned the suit to remove the

Drawing trumps would have been fatal, but South avoided that trap. The bidding strongly

indicated that there were a clubs on his right, so he drew just one round of trumps and led the club queen. When this was allowed to win he played three diamond winners fol-lowed by a low club. This was the key to success, for the de-fense was limited to the club ace and one trump trick.

This was worth 10 points to North-South, for in the replay North played five diamonds and was defeated by the club ruff.

SPORTS

Berlioux, 61, Resigns as Director of IOC

BERLIN — Monique Berlioux, the most powerful woman in world sport, on Wednesday announced her resignation as director of the International Olympic Committee.

Her departure from the post she has held since 1971 had been expected after days of behind-the-scenes battles with the committee's executive board before and during the 10C's 90th session, being held in Berlin's

eastern sector.
The 61-year-old Frenchwoman took only five minutes to announce at a press conference the end of her 18-year link with the Olympic movement. Berlioux, who joined the IOC as director of press and public relations in 1967, said she would remain until Friday's close of the current session.

She would not comment on the terms for severing her contract, due to expire Dec. 31, 1988, but the compensation could be as high as \$1 million, according to an IOC source. Berlioux, a former journalist and Olympic swimmer, will receive her annual salary of 400,000 Swiss francs (about \$133,000) until the expiration date of her contract; additional sums are being negotiated.

Bertioux read a message she had presented to the IOC membership. It said, in part "For many years, I have devoted myself to the service of sport and in particular to the Olympic movement — as an athlete, as an official, as your main assistant, as director of

"Of course, I sometimes found myself in disagreement with some of you on particular issues. This is only natural in an organization like ours, containing so many strong and varied personalities. My only rule of conduct has always been the superior interest of the movement and its ideals.

"As time went on, the differences with the executive board led me — like a journalist invoking his conscience — to decide to put an end to my functions as director....

"I thank you for the confidence you have

believe to be efficient and healthy. I shall always be proud of the level it has reached. I shall say no more. A director has moved on. Long live Olympism, as its founder, my fellow countryman Pierre de Coubertin, would

There had been several previous attempts to oust Berlioux from her post, in which she has served with Presidents Avery Brundage of the United States, Lord Killanin of Ireland and Spaniard Juan Antonio Samaranch.

But over the years, her influence grew steadily; she currently heads a 90-member staff for IOC administration. Berlioux has been a driving force and top planner of all Olympic Games since 1972, and played a key role in preparations for the 1988 Games. She also provided the IOC with continuity, since executive board members have fixed terms and the presidency is voted upon every eight

When Samaranch took command in 1980, he became the first full-time president, living in Lausanne, the Swiss base of the IOC (Brundage and Lord Killanin had carried out their functions from a distance).

Samaranch's style of running the IOC differed markedly from that of his predecessors, and brought him into repeated conflict with Berlioux. The prime mover in the decision to fire Berlioux, Samaranch has made no statement on her resignation. The beginning of the end came Saturday,

the first major rift appearing during an ex-change between Berlioux and the IOC's sports director, Walther Troger, Samaranch then designated three of his executive board members - Berthold Beitz of West Germany, Belgium's Prince Alexandre de Merode and Kbeba Mbaye of Senegal — to present her with an ultimatum. Thereafter, only the terms had to be settled.

secretary-general and four department direcplaced in me and for your help, which have tors, but Samaranch will be in control.

The Associated Press Monique Berlioux

Speaking privately to reporters just after the news conference, Berliour said she in-tends to write her memoirs, adding: "You will still be hearing a lot from me."

The mayor of Paris, Jacques Chirac, is said to be ready to ask Berlioux to head the drive to get Paris the 1992 Summer Olympic Berlioux's departure signals a major up-heaval in the administrative structure of the IOC. Envisioned is the appointment of a her Sunday, following his formal presentation of the Paris Olympic application to the

Connors, Lendl Breeze Into Semis

Compiled by Our Staff From Dispatchet PARIS - Jimmy Connors, de- meetings. layed slightly by a thunderstorm, stopped Sweden's Stefan Edberg in straight sets Wednesday to reach the semifinals of the French Open

tennis championships.
The American left-hander, seeded third in the year's first grandslam tournament, eliminated the 19-year-old Edberg, 6-4, 6-3, 7-6 (7-

Connors will face defending champion Ivan Lendl of Czechoslovakia in Friday's semifinals.

Lend! romped into the next round FRENCH OPEN TENNIS

with a 6-4, 6-2, 6-4 triumph over unseeded Martin Jaite of Argenti-

In the women's semifinals on Thursday, top-seeded Martina Navratilova will meet West German Claudia Khode-Kilsch, seeded seventh, while No. 2 Chris Evert Lloyd will play 14th-seeded Gabriela Sabatini of Argentina.
The 32-year-old Connors and

Edberg were tied, 5-5, in the third set when play was halted by rain. The match was held up for 55 minutes, and after the two players re-turned to the slow, red clay courts of Roland Garros Stadium, each held serve to go into a tiebreaker,

occasionally winning points with improvized shots at the net. which Connors won, 7-2. With the storm clouds gathering, Connors could have finished the match early. He had four break points with the score at 4-4. But Edberg, the No. 14 seed, fired an 3 in the third. ace to pull himself out of trouble

and hold serve. Connors, aiming for a fourth semifinal appearance in a tournament he has never won, was giving

away 13 years to the Swede, who

Jaite broke Lendl's service twice in the third set, but dropped his

Then, with the set even at 4-4, Lendl rediscovered his booming serve and took the ninth game before Jaite crumbled in a disastrous 10th to lose the match. Lendl changed his racket for the final game, but he hardly needed it as Jaite produced a series of errors to surrender without winning a point.

tled back to level the set at 3-3.

picked up. At 5-5, after Connors

had served to level the set once

again, the umpire halted play.
"Rain delays are difficult, but

today worked for me," said Con-

Celtic Coach Jones Crying 'Foul' Into Crying Towel

By Ken Denlinger

Washington Post Service Thours. Turn a microphone and from his generous counsel.

Although it is most unusual for him, Jones is all but reading from physical is D-I-R-T-Y." *

was taking a charge late in Sm.

Boston's Larry Bird, hampered by a burn elbow and nudged a bit keiball Association championship out of even his exceptional range series] and he gets kicked in the by James Worthy, has made just 17 series) and he gets kicked in the head by Larry Spriggs.

The Boston Celtic coach, K.C.

"On the films, I also saw a Laker sneaker kick at the face of Danny [Ainge] when he was on the floor with Kurt Rambis. That's not basketball.

And if Boston, trailing Los Angeles, 2-1, doesn't retaliate in Wednesday's Game 4? "We might as well pack our bags and go home." Jones, one of basketball's true scrappers, has slipped out of the privacy he cherishes because he hopes it will help his team stagger off the ropes against the formerly languid Lakers.

The Celtics' crying foul is close to ludicrous. No team in NBA history has placed elbows harder or more deftly in opponents' ribs than the Celtics; or thrown harder hips or thrived more on intimidation. All of a sudden, Jones is trying to splash quick-drying whitewash on a familiar portrait and repaint the

de was in midsermon near noon Tuesday, talking forcefully but not loudly to a group of reporters. Could it be, one wondered, that the

media has hyped the ugliness of the series beyond reality? It could not. The Lakers are

playing dirty basketball, Jones re-peated.

Slip Anchor, Cauthen Win Epsom

Compiled by Our Staff From Dispatches

EPSOM, England — Slip Anchor, ridden by Steve Cauthen, led from the start to win Wednesday's 206th Epsom Derby. Slip Anchor, the 9-4 favorite, led by more than four lengths at the halfway point of the 11/2-mile (2.41-kilometer) race and crossed the finish line more than seven lengths ahead of the 14-horse field.

Cauthen is the first U.S. rider to win the British flat-racing classic since Danny Maher in 1906. Having tidden Affirmed to the U.S. Triple Crown in 1978, he is also the first jockey ever to have won both the Kentucky Derby and the Epsom Derby.
"I couldn't believe when I looked behind me coming into the straight how far in front I was," said Canthen, who has lived in England since 1979.

Law Society, ridden by Pat Eddery, 100k second place by six lengths over Damister, Frenchman Yves Saint-Martin's mount, which edged Supreme Leader, ridden by Philip Robinson, into fourth. It was also the first derby victory for veteran trainer Heary Cecil. "I've dreamed about this since I was a schoolboy," he said. "Thank God I've won the derby at last."

Before the race, Cauthen, had called the 3-yearold Slip Anchor the best horse he'd ever ridden "He and Affirmed are different types of horses," said Cauthen, 25. "Affirmed never won by more than he had to, but this horse kills them before they have a chance to get at him. I've never ridden a horse with such a stride. Yes, I'd have to say that he

Attacking 'Washington'

cates were lurking around a bar the ington he really means the Demoother day when President Reagan, crats in Washington who are who was barnstorming the country interfering with his programs. And selling his tax reform, came on the when Reagan says he wants the

"Hey," said Beaver. "There's Ronnie, the people's lobbyist." The president had the crowd in his hands when he attacked the

"special interests," "bureaucrats" and "so-called experts" who had "forgotten

about the America that exists beyond the Potomac." Reagan got everyone riled up because he told them Washington didn't care about them. His message was

that it was just Buchwald the voters and him against "the government' Capehart said, "Boy, he sure

looks mad. Beaver laughed. "He isn't mad. He's putting on an act. There's nothing that plays better in Peoria than a president of the United States who hates Washington." Capehart said, "But he is Wash-

ington. All those buildings out there are filled with Reagan bureaucrats. His people have been here for five years. Why does he make it sound as if he doesn't know

who is running the country?"

Beaver said, "Because he just struck a political gold mine. Everyone is against 'special interests,'
'bureaucrats' and the 'so-called experts. What better way to sell a tax reform program than to set up all the straw men in Washington who are against it?"

Dumbarton said, "I haven't met anyone who is against tax reform. I've met people who are against parts of it. But hell, most of them are Reagan's best friends. The housing industry, the oil lobby and the fat cats have been his biggest supporters. I don't think the president has ever addressed a lunch or dinner for less than \$1,000 a plate. If special interests didn't buy those tables I'll eat all the food left on their plates."

I said, "Knowing the president as well as I do I'm sure he is just

WASHINGTON — A bunch resorting to Pat Buchanan's rheto-of us Washington sophisti- ric. When Reagan artacks Washgovernment to get off the people's back, he really means he wants Tip O'Neill to get off his back. The president's strategy is to turn the American people against their elected officials. Being the guy on the white horse is the role he plays

> "Well said," Beaver told me. "We must always keep in mind that those special interests he's flailing are the ones he and Nancy keep inviting over to the White House for dinner. And those tax reform stonewallers that he holds up to ridicule are the very corporation types that keep meeting in the president's kitchen. The biggest mistake we could make is to take seriously anything Ronald Reagan says on the road."

Dumbarton said, "It makes Ronnie happy to pretend he has nothing to do with what goes on here. And I'm one of those who believes that anything that makes Ronald Reagan happy is good for Ameri-

Capehart was still the dissenter. "I have an exception. By demagoguing against this town he takes no responsibility for the fact his administration is the 'Washington' he is attacking. They're his 'so-called experts' that are running the coun-

I could see Capehart didn't get the big picture, so I tried to explain

"The president has discovered you get no ovations from the American people when you defend their government. But he knows he can set them on fire by making them think everyone in Washington is a crook. When Reagan raves and rants about the 'special interests,' he's just invoking his 'Make my day' syndrome."

Capehart wasn't convinced. "There's something wrong with all this. Why doesn't he level with Americans and tell them bow much it really costs to run the country?" Dumbarton said, "If you had a \$200-billion deficit and your Defense Department was paying \$600 for an ashtray, you would only talk

Pilgrims: 2 Museums of 'Living History'

By Fred Ferretti
New York Times Service
P LYMOUTH, Massachusetts I—"I'll be Barbara Standish, Miles's second wife, this year," said Kit Rawlins. "What was she like? Her father was a farmer who raised her to be a typical woman of the period. She kept a good house, she sewed, gardened, knew the right herbs for doctoring. And she took good care of Miles, who we know was very hotheaded. She was gentle but she could be stub-

Rawlins, 31 and a 1978 graduate of the University of Massachusetts, was describing the person she would be playing during the season at Plimoth Plantation. the re-creation in this Atlantic coastal community of the Pilgrims' first settlement. At Phimoth Plantation, Barbara Standish is always 27 years old, for here it is always 1627.

To the west, across the state in Sturbridge, Margaret Piatt, who organizes programs for the interpretations department of Old Sturbridge Village, parts her hair in the middle, puts on a heavy homespun cloak and a heartshaped bonnet that frames her face and goes walking across the village green of that 1830s New England community. "Costumes make the parts we play more personal," Platt said. "Our purpose to interpret to interpret is to involve visitors, to interpret history for them. Garments are a

nice way to do it.'

derstand what the sexes did at Plimoth Plantation and Old that time." "Men were tailors, women Sturbridge Village - two of the

PARIS AREA FURNISHED

Margaret Piatt in one version of a Pilgrim bonnet at Sturbridge Village.

But in Plimoth Plantation they "do not give talks," according to Baker.

"Visitors are supposed to draw them out," he said, "but they may not respond with explanations. A Dutch visitor for example, talking with two of our villagers who were speaking Dutch, was told quietly, 'Leave us alone — we're on a diplomatic mission.' They are always in their roles."

George Plummer, a teacher at St. Johnsbury Academy in Vermont, spends summers as Governor John Carver on a reproduction of the Mayflower in Plymouth Harbor. He said he is always prepared to "talk about the Calvinists, the separatists, why we left England, how King "We have two messages," he James treated us, how it was in Leiden, how we felt our children were becoming too Dutch." He said he never feels that his role is assuming too much importance in his life.

> Travers said the plantation's population changes from year to year. Some people find the acting a strain, he said, "some go on to school, others to other jobs, others get married."

But Kit Rawlins, who is already married, is not to be dis-tracted. All she wants to do this year is be Barbara Standish.

"People come here looking for information," she said. "I can give it, through Barbara. I can lead the conversation, make it interesting, and maybe there will be a little girl like me out there who will want to come here and be a
